Information Systems Technologies Research Outsourcing for You

E-Commerce

*Areas of Expertise: Manufacture,
Business & E-Commerce*

E-Commerce Systems developed by us are web sites for selling one product as well as corporate portals for selling thousands of product items. We develop our systems in such a way, that they can provide quality service for tens of thousands of site visitors a day. For the development of web shops we use our own platform PHP Infostroy Framework and a well known platform Batavi (www.batavi.org) or DotNetNuke, as well as other platforms based on .NET and PHP. All our E-Commerce solutions have an advanced administrative and management systems. We can also integrate these back office systems with different CRM, inventory and accounting systems, payment systems and add many other features. In our systems we implement integration on back end with such software products as MS Exchange, SharePoint, GoldMine, QuickBooks and 1C Accounting program. We can integrate our applications with payment processing systems, such as PayPal, WorldPay and others. For e-commerce business, we can provide integration of our solutions with applications of such courier and mail delivery companies as UPS, DHL, FedEx etc. We have accumulated a considerable amount of experience in the development of such systems, as well as the integration with e-catalog of IceCat production services. This helps automatically transfer data from catalog to the shop database.

**E-Commerce Solutions For
Your Own Online Store**
